D'Andrea Precision Boring Heads with .0001" (.002mm) Ø Setting Accuracy

The D'Andrea TRM fine boring heads bring a high precision work tolerance of IT6 with excellent surface finish as low as 0.8 Ra. Utilizing a selection of boring bars, slides and cartridges an extensive range of diameters in fine boring applications can be achieved. Fine adjustment of the boring head is achieved via a micrometric vernier scale on the dial and is easily adjusted while boring head is in the machine tool. Within the range there are 9 different sizes of boring heads available in the regular TRM offering along with 4 exceptional value boring kits which include all tooling required to cover the diameter range of each head size. Additionally in the program are 2 balanceable high speed boring heads also available in kit format.

Not only are TRM heads available with the immensely popular D'Andrea MHD coupling but now expanded with 5 additional heads using the PSC Polygon Shank Coupling to ISO 26623-2 standards.
